

Prerequisite Coursework for Admission to the MAT Program: Biology Endorsement

Is a degree in Science required? Applicants must hold a baccalaureate degree with a major in the endorsement area (or coursework equivalent to a major in the endorsement area). Majors not aligned directly with endorsement areas will be evaluated and aligned.

The ideal candidate will have satisfied the following requirements:

- One year of General Biology
- Plant Diversity / Field study
- Animal Diversity / Field study
- Genetics
- Evolution
- Ecology
- Cell or Molecular Biology
- Physiology
- Microbiology
- One year of Chemistry with lab
- Statistics

Are there other requirements besides coursework that need to be met, specific to your discipline? Each science endorsement area has its own requirements. Candidate's transcripts will be evaluated for a best fit if they do not hold a degree in one of the four science endorsement areas.
